### **“The Future of Coal in U.S. Electric Power Generation”**

**Thursday, April 26, 2012**

UK Hilary J. Boone Center - 7:00 pm  
Reception immediately following lecture  
(reception sponsored by Nelson Brothers, Inc.)

Free and open to the public  
(parking in Boone Center visitor lot)

Steve Miller is President and CEO of the American Coalition for Clean Coal Electricity (ACCCE). ACCCE believes that the use of coal—America’s most abundant domestically produced energy resource—is essential to providing affordable, reliable electricity for millions of American consumers and a growing domestic economy. ACCCE’s members are committed to continued and enhanced leadership by America’s public and private sectors to develop and deploy new, advanced clean coal technologies that protect the environment.

Steve Miller has a clear understanding of how politics and public opinion shape public policy. A veteran with more than 30 years of experience in politics, government, and social policy, Miller has established a record of supporting public policies that advance economic prosperity, energy security and environmental improvement.

In 1994 Miller was named President and CEO of the Center for Energy and Economic Development (CEED) - a predecessor organization to ACCCE. ACCCE advocates responsible energy and environmental policies at the federal, regional, state and local levels. The organization also manages an extensive communications campaign to take the message of Coal’s vital role as a fuel to generate electricity to the American people.

Mr. Miller is a graduate of the University of Kentucky and the UK School of Law.
